DETAILED ACTION

1. This is response to the Amendment filed on November 10, 2005. Claims 3-5 and 7-20 are pending in the Application. Claims 3-5 and 7-20 are currently amended.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 3-5 and 7-20 rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Patent No. 6,954,191.

The current Application recites at least one limitation in claims 1 and 7 “wherein the digital value W is based on both of the maximum value and a minimum value of the digital input values”, whereas the conflict claims 1-18 of the U.S Patent No. 6,954,191 recites at least one limitation “the predetermined calculation processing obtains the digital value for driving the luminance-intensifying subpixel by a function of $W=f(Y_{min}, Y_{max})$ where the digital value of

the luminance-intensifying pixel is defined as W ". It would have been obvious to recognize the function $W=f(Y_{min}, Y_{max})$ is performed the same functionality to determine the "digital value W that based on both of the maximum luminance value and minimum value of the digital input values", i.e.: the maximum and minimum luminance values of the input Red, Green and Blue sub-pixels.

Response to Arguments

4. Applicant's arguments with respect to claims 3-5 and 7-20 have been considered but are moot in view of the new ground(s) of rejection.
